## EDUCATION

**Bachelor of Computer Science** 2018 - 2023
Dalhousie University | Halifax, NS

## SKILLS

- Full stack software development: 3+ years experience with **.NET** and **C#** backends, along with frontend **Javascript** frameworks including **Next.js , React.js** and **Vue.js.**
- Strong leadership and communication skills developed as a **Computer Science Instructor** at SuperNOVA and **Teaching Assistant** for Java at Dalhousie University.
- Proficient in **SQL** database management and **Git** for version control.
- Highly experienced in developing and integrating with **APIs** across a variety of applications.

## WORK EXPERIENCE

**Software Developer | Cougar Helicopters** March 2024 - Present
St. John's, NFLD
(Contract through Immediac and Venor)

- Modernizing internal systems by analyzing legacy codebases and rebuilding them into clean, maintainable, and efficient web applications.
- Developed a custom training platform and multiple API projects to improve usability for employee certifications and overall company data management.
- Key technologies: **.NET, C#, SQL, Next.js, React.js**

**Software Developer | Immediac** Sept 2021 - Present
Halifax, NS

- Full-stack developer responsible for designing, building, and maintaining client websites and custom web applications from initial requirements through deployment.
- Collaborate with team members to deliver responsive and accessible solutions tailored to each client's needs.
- Key technologies: **.NET, C#, SQL, Vue.js**

**Teaching Assistant | Dalhousie University** May 2021 - Sept 2021

- Led computer science labs for students in the course CSCI 1105: Intro to Computer Science.
- Applied knowledge of Java to mark assignments and quizzes and assist with questions during lab.
- Key technologies: **Java**

**SuperNOVA | Dalhousie Co-op program** January 2021 - May 2021

- Instructed youth by leading workshops and helped design content to introduce and enhance knowledge of computer science through coding, animation, and hands-on activities.
- Designed and developed a website for the launch of a new high school space program.

**Wild Blueberry Research | Dalhousie Co-op program** June 2020 - September 2020

- Designed and edited two websites for the research program using Dalhousie University's content management site.
- Assisted with research activities by analyzing plant samples and performing administrative tasks such as responding to emails and data entry.

## PROJECTS

**Frampton Lab Web App**

Client Project | Immediac 2024

- Built a web application that integrates Python data processing within a .NET environment, enabling researchers to execute scripts directly through the browser.
- Designed and implemented a clean, responsive UI for displaying real-time calculation results and data visualizations.
- Technologies: **.NET, C#, Python**

**VMO Operations Control API** 2025

Internal Project | Cougar Helicopters

- Designed and implemented a .NET Web API to connect Cougar Helicopters' VMO flight management system.
- Built and optimized multiple endpoints to allow real-time synchronization of flight data entered by flight followers with their legacy internal display and monitoring systems.
- Ensured reliable communication between the VMO API and Cougar's internal APIs to support security and accuracy across flight information displays.
- Technologies: **.NET, C#, SQL, REST APIs**

**Personal Portfolio Website** 2025

- A quick website I developed on the side to showcase some of my client projects and other just-for-fun projects I've built outside of work.
- Developed using Next.js and connected a SQL Supabase backend for simplified free hosting with Netlify.
- Technologies: **Next.js, SQL**

## Volunteer Experience

**Make a Wish Volunteer** 2025 - Present

**Faculty of Computer Science Volunteer** 2019 - 2023
